

Week 4: Scoring & Level System

Objectives

1. Implement a scoring mechanism with difficulty levels (1–4)
2. Create a scoring calculator that tracks correct keystrokes and accuracy
3. Define difficulty levels with word length thresholds (Easy, Medium, Hard, Expert)
4. Implement multiplier system based on difficulty level

Task Breakdown

- Create ScoringCalculator.java class
- Create DifficultyLevel.java enum with 4 levels
- Create unit tests for scoring calculations

Deliverables

- ScoringCalculator.java class with full implementation
- DifficultyLevel.java enum (4 levels with multipliers)
- ScoringCalculatorTest.java (JUnit test suite)

Tools & Resources

- Apache NetBeans IntelliJ IDEA
- Java JDK 11+
- JUnit 4 / JUnit 5
