

Week 3: Core Typing Logic (CLI)

Objectives

- Implement typing timer functionality
- Create word matching system
- Calculate typing accuracy
- Track words per minute (WPM)

Task Breakdown

- Create Timer class with start(), stop(), reset() methods
- Implement WordMatcher class for character-by-character comparison
- Develop AccuracyCalculator class to compute WPM and accuracy %
- Create TestRunner CLI class to test all logic independently

Deliverables

- Timer.java class file
- WordMatcher.java class file
- AccuracyCalculator.java class file
- TestRunner.java CLI application
- Week 3 test results pdf

Tools & Resources

- Java JDK 11+
- IntelliJ IDEA / Eclipse
- Git & GitHub for version control
