

Week 5: Timer & Feedback System

Objectives

- Add a visible countdown timer to the test
- Display live WPM and accuracy while the user is typing
- Provide instant feedback during the test

Task Breakdown

- Implement a countdown timer that updates every second
- Calculate and update WPM in real time as the user types
- Calculate and update accuracy percentage in real time
- Add logic to automatically stop the test when time runs out
- Connect timer, WPM, and accuracy calculations to the core typing logic from Week 3
- Test the real-time updates for correctness and smooth performance

Deliverables

- Working countdown timer integrated with the typing logic
- Live WPM and accuracy calculation methods
- Auto-stop functionality when the timer reaches zero

Tools & Resources

- Java JDK 11+
- IntelliJ IDEA / Eclipse
- Git & GitHub for version control
- Java swing
